Please let us know on the forums or on our support page! Also, feel free to ask any questions you may have about this version. The "Presentation for PC" version (Presentation Pc) is a free program that allows you to share your desktop with other users of your local area network (LAN). The program can be easily used from a Web site or within another software application, either locally or remotely. The presentation is a time-based sharing function that allows the presenter to share and share their desktop with other network users.

Once the presentation is started, the presenter can simply walk around their desktop (mouse) and speak to their audience (people on the network). Presentation Pc supports multiple users on a computer. It is able to capture the desktop image, and, using the built-in video display capabilities of Microsoft Windows, display it to the viewers. The webcam (and other audio input devices) can be used to add voice to the presentation. You can also add simple text, such as names and URLs, to your presentation using the text area displayed on the viewers' computers. When the user runs the program, they will simply need to point their mouse cursor at their desktop and click on their name. The program will grab a picture of the desktop, save it, and notify the other users that you are sharing your desktop. The desktop will be grabbed in a new tab in the main window, and the captured image will be displayed. The viewers' computers can be connected via a local area network or the Internet, and all users will be able to view the same desktop image. The presenter can start and stop sharing at any time, either through the program interface or through the presentation program. Presentation Pc supports many video, audio and text (pixels) input sources. Presentation Pc will automatically
